

III - In2Invest

INTRODUCTION

In2Invest is a BEP20 token, which will run on the Binance Smart Chain, a platform for smart contract which facilitates fast transactions.

This token hopes to address certain problems such as distribution of wealth, ownership of businesses, funding to start-ups and loans to existing SMEs, and the actualisation of potential project for individuals.

In2Invest is a community token for communal investment. Our solutions are to establish sustainable businesses, fund start-ups, and invest in financial instruments. Unlike other assets which are backed by nothing more than a hope that their prices would rise or that some celebrity's action would help boost its price. In2Invest is not only backed by our investment into other assets, businesses or instrument but also by *hodling* it.

The absolute and limited quantity of the token and its mode of distribution will add in ensuring that it does not lose its value. This is further enforced by the investments that will be made using funds generated in distributions.

We are all here to achieve wealth.

Wealth = Assets – Liabilities

Together, let's create wealth.

CASE STUDY

Case Problem 1:

As of January 2020, the combined market capitalisation of the top 10 wealthiest companies totalled a value of \$13,507,000,000,000.00 (\$13.5 Trillion)

The majority of that wealth is owned by the super-duper rich, the 0.001% - The Mega Billionaires. The rest is distributed among the rich and a meager amount for the rest of us, who might have been able to invest at an earlier stage.

Read more - [Distribution of wealth - Wikipedia](#)

Case Solution:

This project aims to combat that problem by distributing more of the profit and create generational wealth.

Our vision is to –

1. Create global businesses and projects
2. Invest in High-Yield Bonds, Fixed Income, Stocks via Wealth/Investment Management Services
3. Invest in Start-ups

These ventures will be governed by the community.

Case problem 2:

Many potential investors around the world especially in third world and developing countries do not have the capabilities or resources to invest in bonds and stocks of certain countries due to:

1. Scarcity of knowledgeable Investment Managers
2. Lack of affordable and reliable brokers
3. Untrustworthy brokers
4. Corrupt governments
5. High fees
6. Certain markets being closed to those regions.

Case Solution:

We hope to invest a combined portion of our funds in dividend yielding stocks, high-yield bonds, fixed income bonds, and other interest yielding instruments as voted for by the community.

Product Specification and Practical Potential

In2Invest token is a smart contract between us, its creator (The firm) and you, the investor (The Community) to establish businesses worldwide, invest in assets, and have such businesses and investment governed by you. Dissimilar to stocks where once you sell your shares you lose any dividends, with In2Invest, dividends/profits are still paid out but in a reduced amount.

Profit Distribution

Proposed Community Share	=	60%
Trust/Company Share	=	20%
Savings	=	10%
Owner	=	10%

Initial Investor – Cash, Presales and IDO investors would have a lifetime share of profit from wealth created by the businesses and investments, for which the community voted. This is true, even if ever they decide to sell their tokens. The share will be *i* of shares owned by the community¹.

Current holder – Any current holder at time of profit distribution will receive a share of *h* of shares owned by the community. A yearly snapshot of holders will be taken at a time unknown¹

Community Profit Distribution:

$$\left(\frac{0.02}{100} \times x \right) + \left(\frac{0.01}{100} \times x \right) \times 0.6 \times p = F$$

Where:

500 units of III(*x*) = 1

Initial Investor share (*i*) = 0.02%

Hodler share (*h*) = 0.1%

Community Profit Share = 0.6

Profit = *p*

Final share = F

TOKENOMICS

Pre Sales	=	5,000,000
IDO	=	7,000,000
Liquidity	=	5,000,000
Owners/Dev/Mngt.	=	2,500,000
Minting/Mining	=	5,500,000

Absolute Supply	=	25,000,000
-----------------	---	------------

Price: 1.0 III = 0.002 BNB

Pre Sale

Minimum invested per investor	=	1 BNB
Maximum invested per investor	=	20 BNB

Initial Digital Offering (IDO)

Minimum per investor at IDO	=	0.5 BNB
Maximum per investor at IDO	=	10 BNB

Liquidity

July 2021(Date TBA)	=	1,250,000
November 2021(Date TBA)	=	1,250,000
March 2022(Date TBA)	=	1,250,000
July 2020(Date TBA)	=	1,250,000

Owners/Development Team/Management

Tokens held by this group will be locked for the next six (6) months and a certain amount would be released in a timely fashion.

Minting

There would never be more than 25,000,000 In2Invest Token.

A token will be produced for every block or 500,000 transactions completed on the contract²

Any token leftover from pre-sales will go into IDO, and any leftover from IDO will go into Liquidity.

AUDITING

We would endeavour to carry out an audition of the smart contract to insecure its security in a timely fashion.

ROADMAP

After the presale, the website would be redesigned to further reflect our roadmap and ideas for the future.

GOVERNANCE

Guidelines highlighting the governance by the Community and Trust will be discussed via our social media channel.

TEAM

E. E – Founder, United Kingdom

I have been a Microsoft Certified Professional since 2004. Ever since I saw a computer on the TV series, Space 1999, I have always been intrigued about how they could “solve” problems. I wrote my first program on a Commodore 64 computer.

I have been actively engaged in the cryptocurrency community since the introduction of Bitcoin in 2009. I love reading, researching, tinkering and gaming

G. K – Developer, Ukraine

I have worked in the Blockchain, and Fintech industry for 6 years, and has been involved in the creation of a few tokens and currently working on the development of a Blockchain.

The team or at least the founder will be coming forward in the future. We know it can seem untrustworthy not disclosing one's self at this time but due to security, it would remain that way for now. Thanks for your understanding.

NOTES

¹Any information we choose to withhold is a trade secret and it is done so as to protect our intellectual rights and competitive edge. *Imagine if Coca-Cola revealed its actual ingredients.*

²We are currently brainstorming to figure out how to implement this automatically, but whatever decision is reached, a minimal amount of tokens not exceeding 250,000 will be minted each year.

We hope you invest and look forward to build wealth together.

Innovation Into Investments.

Disclaimer: The value of your investments, and any income derived from them, can fall or rise and is not guaranteed. Past performances are not indications of future returns.
